

Last Update: t=1

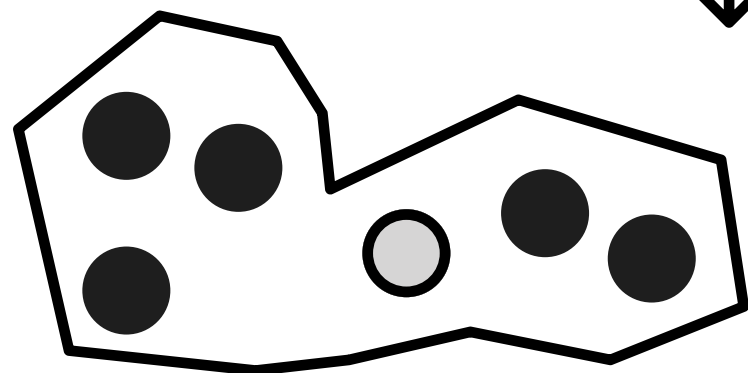

Last Update: t=3

Last Update: t=2

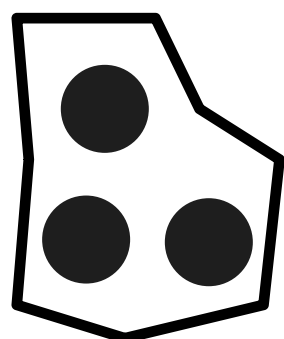

Last Update: t=4

t=4: Initial (populated) state.
Left cluster, last updated at t=2.
Two noise points. Right cluster,
last update at t=4.

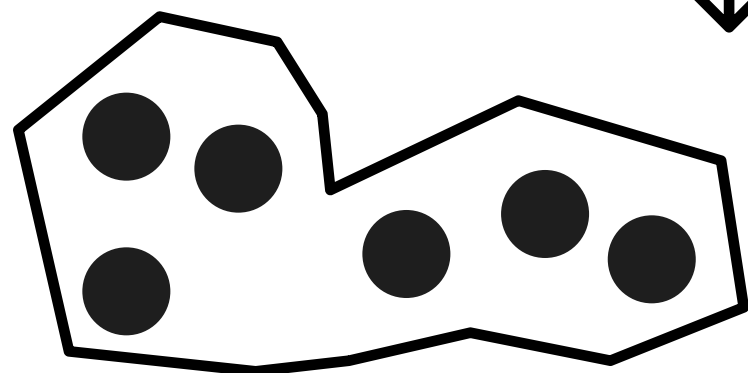

Last Update: t=6

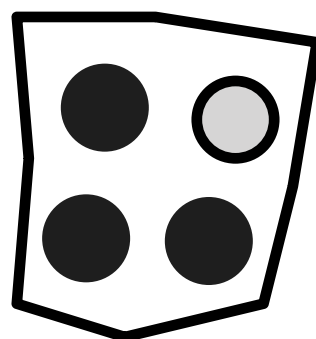

Last Update: t=4

t=6: New node connects left cluster
with 2 noise neighbors. Noise & left
cluster within cluster distance ($d < \text{eps}$)
of new point; they form a new left
cluster.

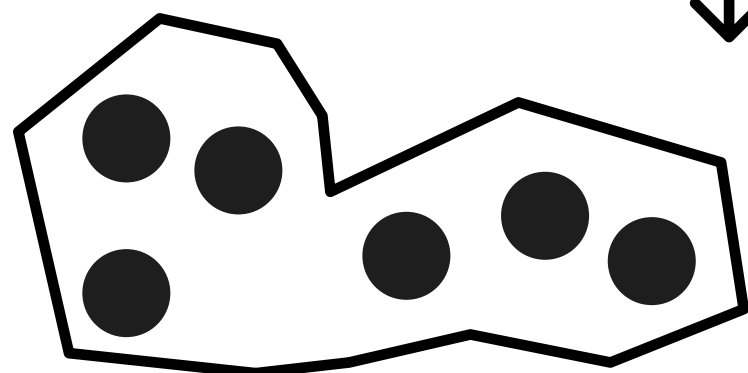

Last Update: t=6

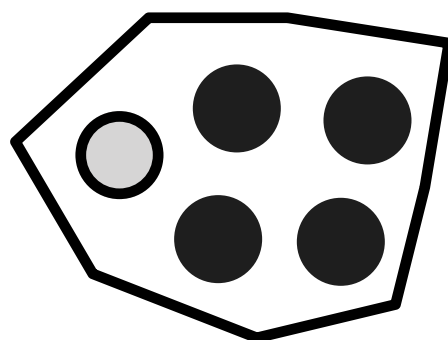

Last Update: t=8

t=8: A new node is added, expanding
right cluster.

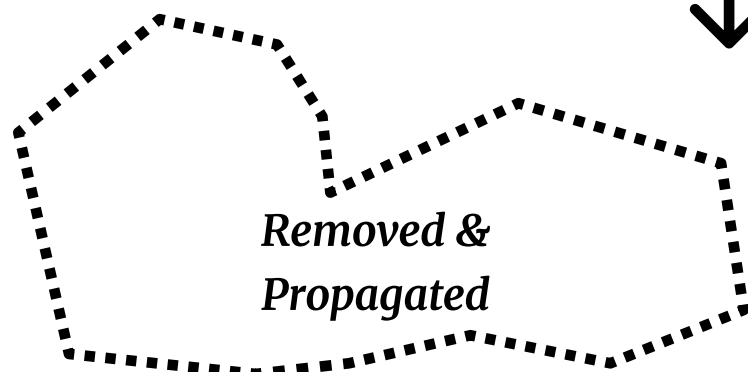

Last Update: t=6

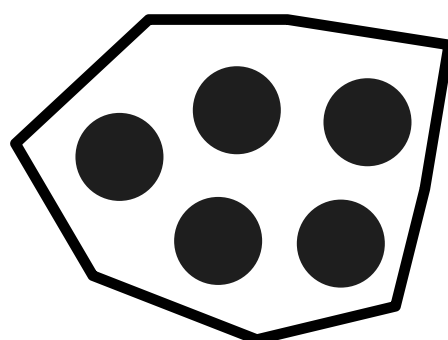

Last Update: t=11

t=11: A new node is added, expanding
the right cluster.

Removed &
Propagated

Last Update: t=6

Last Update: t=11

t=11: After adding node, left cluster
timed out (no update in last 5
timesteps, $\tau = 5$). Closing left cluster
and propagating to the next stage.
